 RPX Acc No: N85-207300
    (New *embryo*-*genic* *callus* and cell suspensions of corn in-bred B73
    useful for regeneration of whole plants for in vitro selection of
    plants with desirable trait(s)
 Index Terms: NEW CALLUS CELL SUSPENSION CORN BRED ; USEFUL REGENERATE WHOLE
    PLANT VITRO SELECT PLANT TRAIT
Patent Assignee: (STAU ) STAUFFER CHEMICAL CO
Author (Inventor): LOWER K S

 Abstract (Basic): EP 160390
          Embryogenic callus and embryogenic cell suspns. of corn inbred B73
     and their clones are new.
          Corn plants and their seed regenerated from embryogenic callus and
     embryogenic cell suspn. of corn inbred B73 and their clones are new.
          The corresp. mutagenised callus and cells suspns., and plants and
     seeds are new.
          Progeny of corn plants regenerated from embryogenic callus and
     embryogenic cells suspns. of corn inbred B73 and their clones. the
     progeny including mutants and variant progeny, are new.
          USE/ADVANTAGE - Whole plants can be regenerated from the
     embryogenic tissue and cell suspn. cultures of corn inbred B73 so that
     in vitro selections for desirable traits or against undesirable traits
     can be made. The cultures may be exposed to herbicides or pathotoxins
     for selection of resistant tissues and cells, and for regeneration of
     resistant plants. In this way improved corn crops can be obtd. @(26pp
